

## *Business Intelligence for Food & Beverage Companies*

*“Making the right decisions at  
the right time”*

Most Food & Beverage companies produce and store large amounts of information. There is an ever increasing administrative burden, mostly related to food safety regulations. How can you get the exact information you need from all that data quickly, and how do you use this information? SI Foodware, the leading Microsoft Dynamics NAV add-on for the global Food & Beverage industry since 1998, offers Business intelligence functionality – Food Management Dashboard. The Food Management Dashboard offers pre-defined Key Performance Indicators (KPI's) and reports that are specifically designed for the Food and Beverage industry. It empowers you to make the right decisions at right time. And the result? Better understanding of how your business operates, optimized efficiency for Business processes, reduced risk and better financial result.

How do you know for certain that your current sales and purchases are on budget? Are you able to compare actual output and consumption of ingredients (raw and purchased) with planned amounts? These are just a few of the many important questions and issues that often need answers as quickly as possible. Where do you begin to look for answers? The SI Foodware Management Dashboard makes it extremely easy to access the right data and interpret it the right way. It offers a click through setup for all KPI's – starting from the main dashboard and drilling down to the detail. The main dashboard offers an overview of the status of the four most important factors that determine the success of your business: costs, quality, flexibility, profitability. Within a few clicks you will be able to see which processes are performing as planned and which ones deserve your attention.

### **Easy to work with and no customizations needed**

The Food Management Dashboard is based on Microsoft Excel – this makes it easy to work with. The dashboard becomes part of your own personalized SI Foodware screen – so you don't have to switch screens to see how you are doing. These values are based on KPI's from the Norton and Kaplan Balanced Scorecard model. This makes the Food Management Dashboard an “out of the box” ready to use solution for every company that operates in the Food & Beverage industry.

### **Learn more about the Food Management Dashboard**

*The information requirements and the systems for storing data differ per company. We would be happy to discuss with you how we can gather and structure the right information in your organisation. If you would like to experience an online demonstration of the Food Management Dashboard or just receive more information, please do not hesitate to contact us, by sending an e-mail to [foodware@libertygrove.com](mailto:foodware@libertygrove.com). We want you and your staff to make fast analyses, so you can make the right decision in time.*
